

HD DIFF HOUSING REAR TRACK CORRECTION - SUITS LC76/78/79

Correct the rear track of the Toyota LC78/79 to match that of the front and benefit from dramatically improved ride quality and handling – safety and predictability are at the ready! Whatever the conditions – towing, heavy loads, or rough off-road tracks – Multidrive Technology has your ‘back’.

The HD Diff Housing rear track correction system to suit the 2007+ Toyota LC76/78/79 is an effective, engineer-approved option which meets the demands of GVM upgrades to 3950kg. With basis of a brand-new OEM diff housing, fitment at the critical locations – diff centre and stub ends – is guaranteed. The OEM-look of the HD Diff Housing will fully compliment your vehicle, whilst providing strengthened and track corrected performance.

Developed precisely via 3D scanning, CAD modelling, and FEA verification, the HD Diff Housing rear track correction system is fully approved via third-party consulting engineers. Our dedicated production facilities ensure quality conformance on every kit.

Multidrive Technology offer both pre-registration fitment under Second Stage Manufacture (SSM) compliance approval, or post-registration fitment via Vehicle Assessment Signatory Scheme (VASS) Engineering Certificate. Assurance is guaranteed that such a significant modification is properly applied against every vehicle.

Our track correction range also includes the innovative Tru Tracker™ and is fully complimented by additional modifications including GVM upgrades and chassis extensions. We may assist also with fitment of a tray or incorporate other required accessories.
