

TRU TRACKER REAR DIFF TRACK CORRECTION - SUITS LC78/79

Correct the rear track of the Toyota LC78/79 to match that of the front and benefit from dramatically improved ride quality and handling – safety and predictability are at the ready! Whatever the conditions – towing, heavy loads, or rough off-road tracks – Multidrive Technology has your ‘back’.

The innovative Tru Tracker™ to suit the 2007+ Toyota LC78/79 is the most cost effective, engineer-approved option on the market and meets the demands of GVM upgrades to 3780kg (*for install only on the OEM laminated housing).

Developed precisely via 3D scanning, CAD modelling, and FEA verification, the Tru Tracker™ is fully approved via third-party consulting engineers. Our dedicated production facilities ensure quality conformance on every kit.

Multidrive Technology offer both pre-registration fitment under Second Stage Manufacture (SSM) compliance approval, or post-registration fitment via Vehicle Assessment Signatory Scheme (VASS) Engineering Certificate. Assurance is guaranteed that such a significant modification is properly applied against every vehicle.

Our track correction range also includes a replacement HD housing and is fully complimented by additional modifications including GVM upgrades and chassis extensions. We may assist also with fitment of a tray or incorporate other required accessories.
