

SBI212 DUAL BATTERY SYSTEM – SUITS LC70S

Multidrive Technology's SBI212 dual battery system for the Toyota LC70 Series provides a reliable means to power vehicle accessory requirements. Whether you're running radios, lighting, or keeping the fridge cool, Multidrive Technology will keep you charged up!

The SBI212 dual battery system is Multidrive Technology's simplest dual battery configuration option, designed for robust fleet or basic 12V requirements. The system protects the start battery from excessive discharge, while allowing the auxiliary battery to power accessories. The SBI212 also allows linking of the start and auxiliary batteries via OEM style dashboard mounted switch in case of high-power or auxiliary starting requirements. For the ultimate dual battery setup, this product may also be combined with Multidrive Technology's BCDC1225D dual battery system.

Multidrive Technology offer on-vehicle fitment for this system via our dedicated workshop facilities. Assurance is guaranteed that this dual battery kit is expertly applied against every vehicle. Be confident during work or remote adventures that power will always be at hand.

Our range of LC70 Series dual battery systems are fully complimented by our GVM upgrades, chassis extensions, and rear track correction options. We may assist also with fitment of trays or incorporate other required accessories.
