

3950KG PARABOLIC GVM UPGRADE - SUITS LC78/79

If a safe, legal, and practical increase to vehicle carrying capacity is required, a Gross Vehicle Mass (GVM) upgrade is the solution. Benefit not only from increased load carrying capacity, but significantly improved handling characteristics of Terrain Tamer Parabolic springs. Whether it be heavy cargo, towing, or a combination of both – Multidrive Technology have you covered.

The Parabolic 3950kg GVM upgrade kit to suit the 09/2016+ Toyota LC78/79 has been carefully developed with vehicle-specific requirements in mind. Full testing is undertaken via third-party engineering signatories prior to approval and product release to market. Each GVM upgraded vehicle is fit-for-purpose and backed by quality componentry.

Multidrive Technology offer both preregistration fitment under Second Stage Manufacture (SSM) compliance approval, or post-registration fitment via Vehicle Assessment Signatory Scheme (VASS) Engineering Certificate. Assurance is guaranteed that such a significant modification is properly applied against every vehicle.

Our GVM upgrade range is fully complimented by rear diff track correction options and chassis extensions. We may assist also with fitment of a tray or incorporate other required accessories.
